

Feed Your Garden's Potential

Want more from your garden? Elevate its performance! Plant Chow products work harmoniously from soil to leaf with nature's efficient system for plant growth health. Apply Plant Chow's Soil & Root for dynamic soil diversity and Plant Chow's ionically enhanced nutrients to cultivate lush, bountiful gardens naturally. Healthier garden, happier you!

STEP 1

Superior Leaf Absorption

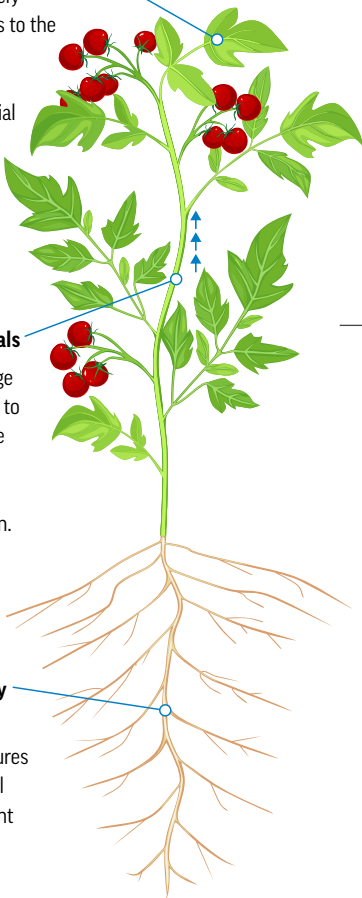

Plant Chow's proprietary ionized liquids immediately pass through leaf cuticles to the epidermis upon contact. This penetration benefit helps to overcome potential mineral deficiencies in the upper plant.

High Performing Minerals

Our process reduces large mineral particle clusters to less than 1 micron in size for easy internal plant movement, root uptake, and deficiency correction.

Soil Health and Activity

Rapid colonization of beneficial microbes ensures soil biodiversity, rootball growth, and seed-to-plant production stability.

Soil & Root

Our natural, triple-action soil amendment with beneficial microbes, replenishes key nutrients during early plant growth stages. Apply before planting in the early spring and periodically throughout the growing season to elevate soil microbial productivity. Soil & Root is packed with trillions of beneficial microbes that amend nitrogen and calcium levels.

- Nitrogen and calcium for root growth and nutrient uptake
- Root protection against soil-borne pathogens
- Greater soil respiration, biodiversity health, and soil fertility

STEP 2

All Purpose

A balanced feed formulation for mature flower garden beds, indoor and outdoor container plants, and shrubs. Apply to both the soil and the plants or shrubs during feeding. Plant Chow penetrates plant leaves 600 times faster than other leading brands, and up to 1½ times more nutrients penetrate deeper into the leaf and stem to ward off deficiency.

Vegetable

Studies prove that our ionically-boosted nutrient blend penetrates plant leaves and stems within seconds of application (600 times faster than other leading brands). More than 1½ times the nutrients traveled deeper within the plant in under 10 minutes! When applied to both foliage and soil, it feeds the plant from top to bottom, producing large, bountiful, sweet-tasting, and nutrient-rich fruits and vegetables.
